		37-40 m	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•

The above cable sizing table is used by running across the top row until the column with the relevant amperage is found, and then moving down the left-hand column until the row with the relevant distance is reached. Wire sizes are denoted by colour coding.

Gauge:

A common way for referencing a cable size is its "gauge." The American Wire Gauge (AWG) is used as a standard method of denoting wire diameter, measuring the diameter of the conductor - measured as only the bare wire with the insulation removed. AWG is sometimes also known as Brown and Sharpe (B&S) Wire Gauge.

Below is a conversion chart from AWG/B&S to mm². This table gives the closest equivalent size cross references between metric and American wire sizes. In Europe and Australia, wire sizes are expressed in cross sectional area in mm².

Standard	Unit													
	0000	000	00	0	1	2	4	6	8	10	12	14	16	
AWG														
Diameter (mm)	11.68	10.40	9.27	8.25	7.35	6.54	5.19	4.11	3.26	2.59	2.05	1.63	1.29	

Standard	Unit													
Cross Section (mm ²)	107.1	84.9	67.5	53.5	42.4	33.6	21.2	13.3	8.4	5.3	3.3	2.1	1.3	
Colour Code

Colour Coding

While it is possible to use the same cables for AC and DC circuits, it is advisable to use different coloured cables between the two types of currents, both to increase handling safety but also to make installation and repair work much faster. If existing appliances or installations have colours, logistics managers may consider replacing or standardising them by re-colour coding the wires with an external paint or marking in a method that makes sense.

A general colour code for AC looks like:

- **Neutral:** Blue.
- **Phase:** Brown or black.
- **Ground:** Green/yellow.

The neutral and the phase are the two connections for the electricity, the ground is for safety.

Colour code for DC (direct current, battery):

+ = red or blue

- = black or brown

Many differing international standards apply however. Please reference the below table for colour coding of different countries and regions around the world.

Standard Wire Colours for Flexible Cable
(e.g. Extension Cords, power cords and lamp cords)

Region or Country	Phases	Neutral	Protective Earth/Ground
European Union (EU), Argentina, Australia, South Africa			
Australia, New Zealand	 	 	
Brazil	 		
United States, Canada	 (brass)	 (silver)	 (green) or  (green/yellow)

Standard Wire Colours for Fixed Cables
(e.g. In/On/Behind the wall wiring cables)

Region or Country	Phases	Neutral	Protective Earth/Ground
--------------------------	---------------	----------------	--------------------------------

Standard Wire Colours for Fixed Cables
(e.g. In/On/Behind the wall wiring cables)

Region or Country	Phases	Neutral	Protective Earth/Ground
Argentina			
European Union and UK			
UK Prior to March 2004			 (formerly)

Standard Wire Colours for Fixed Cables
(e.g. In/On/Behind the wall wiring cables)

Region or Country	Phases	Neutral	Protective Earth/Ground
Australia, New Zealand	<p>Any colours other than:</p>  <p>Recommended for single-phase:</p>  <p>Recommended for multi-phase:</p> 	 <p>or</p> 	 <p>(since 1980)</p>  <p>(since 1980)</p>  <p>bare conductor, sleeved at terminations (formerly)</p>
Brazil			

Standard Wire Colours for Fixed Cables
(e.g. In/On/Behind the wall wiring cables)

Region or Country	Phases	Neutral	Protective Earth/Ground
South Africa	 <p align="center">or</p>		  <p align="center">bare conductor, sleeved at terminations</p>
India, Pakistan			
United States	 <p align="center">(120/208/240V) (brass)</p> <p align="center">(277/480V)</p>	 <p align="center">(120/208/240V) (Silver)</p>  <p align="center">(277/480V)</p>	 <p align="center">(green)</p>  <p align="center">bare conductor</p>  <p align="center">(ground or isolated ground)</p>

Standard Wire Colours for Fixed Cables (e.g. In/On/Behind the wall wiring cables)			
Region or Country	Phases	Neutral	Protective Earth/Ground
Canada	 (120/208/240V)		
	 (600/347V)	 (120/208/240V)	 (green)
	 (single-phase isolated systems)	 (600/347V)	 bare conductor
	 (three phase isolated systems)		 (isolated ground)

Important points to note when wiring:

- All circuits should be removed from the floor and be as high as possible with no connections in or near water or damp areas.
- All cable lug connections should be securely crimped to the wire termination with a band, and not soldered in place.
- Tinned cable – copper wire that has been coated with a thin layer of tin to prevent corrosion - It is preferable to use where possible in a marine environment or near salt water.
- Never tap into or splice existing circuits when installing new equipment; run a properly sized new duplex cable (positive and negative cable in a common sheath) from the

distribution panel (or a source of power) to the appliance.

- It is recommended to label all cables at both ends, and to an updated wiring plan to aid in future troubleshooting. Copies of the wiring plans can be even be stored in locations such as the fuse box or distribution box so that future users can reference them.
- Each circuit should have an independent ground cable, and all the ground cables should eventually be tied back to a common ground point/busbar.
- Unless in a conduit, cables should be physically supported at least every 450mm.
- Although black is often used for DC negative, it is also used for the live wire in AC circuits in the USA. That means there is potential for dangerous confusion. DC and AC wiring should be kept separate; if they have to be run in the same bundle, one or the other should be in a sheath to maintain separation and ensure safety.
